Preface	1
I Automata and infinite words	5
1 Introduction	5
2 Words and trees	6
3 Rational sets of infinite words	13
4 Automata	17
5 Büchi automata	25
6 Deterministic Büchi automata	31
7 Muller and Rabin automata	35
7.1 Muller automata.	35
7.2 Rabin automata.	39
7.3 Muller automata with a full table	42
8 Transition automata	44
9 McNaughton's theorem	46
10 Computational complexity aspects	61
10.1 From ω -rational expressions to Büchi automata and back.	62
10.2 From Büchi automata to Rabin automata.	63
10.3 From Rabin automata to Muller automata.	64
10.4 From Rabin automata to Büchi automata.	64
10.5 From Streett automata to Büchi automata.	65
10.6 Complexity of algorithms on automata.	66
11 Exercises	68
11.1 Words and trees.	68
11.2 Rational sets.	68
11.3 Büchi automata.	68
11.4 Deterministic Büchi automata.	69
11.5 Muller automata.	70
11.6 McNaughton's theorem.	71
12 Notes.	72

II	Automata and semigroups	75
1	Introduction.	75
2	Ramseyan factorizations and linked pairs.	77
2.1	Ramseyan factorizations.	77
2.2	Linked pairs.	79
2.3	Ultimate classes.	82
2.4	Idempotent linked pairs.	85
3	Recognition by morphism.	86
3.1	Semigroup morphisms.	86
3.2	Morphisms of ordered semigroups.	89
3.3	Congruence and syntactic order.	91
3.4	Residuals.	92
4	Semigroups and infinite products.	92
4.1	ω -semigroups	92
4.2	Morphisms of ω -semigroups	94
4.3	Free structures	96
5	Wilke Algebras.	97
6	Recognition by morphism of ω -semigroups.	102
7	The two modes of recognition.	105
8	Syntactic congruence.	111
9	Back to McNaughton's theorem.	117
10	Prophetic automata.	122
11	Exercises.	127
11.1	Ramseyan factorizations.	127
11.2	Recognition by morphism.	128
11.3	Wilke Algebras.	128
11.4	The two modes of recognition.	129
11.5	Syntactic congruence.	129
11.6	Back to McNaughton's theorem.	129
11.7	Prophetic automata.	130
12	Notes.	130
III	Automata and topology	133
1	Introduction.	133
2	Topological spaces.	134
2.1	Countable sets.	134
2.2	General topology.	136
2.3	Metric spaces.	138
2.4	Polish spaces.	140
2.5	Borel sets.	141

3	The space of infinite words.	144
3.1	The topology of A^ω	144
3.2	Closed sets.	146
3.3	Clopen sets.	149
3.4	The second level of the Borel hierarchy.	150
3.5	Compactness.	152
3.6	The Borel hierarchy of A^ω	154
4	The space of finite or infinite words.	157
5	Borel automata.	163
6	Suslin sets.	168
7	The separation theorem.	176
8	Exercises.	179
8.1	Topological spaces.	179
8.2	The space of infinite words.	179
8.3	The space of finite or infinite words.	181
8.4	Borel automata.	183
9	Notes.	184
IV	Games and strategies	187
1	Introduction.	187
2	Infinite games.	188
3	Borel games.	190
3.1	Open games.	190
3.2	Π_2 -games.	192
3.3	Martin's theorem.	192
4	Games on graphs.	196
4.1	Simple games.	198
4.2	Winning conditions.	199
4.3	Parity games.	202
4.4	Parity automata.	204
4.5	Rational winning strategies.	206
5	Wadge games.	207
5.1	Wadge lemma.	208
5.2	Rational reduction.	209
6	Exercises.	211
6.1	Borel games.	211
6.2	Infinite games.	211
6.3	Games on graphs.	212
7	Notes.	212
V	Wagner hierarchy	215

1	Introduction.	215
2	Ordinals.	216
3	Classes of sets.	218
	3.1 Wadge classes.	219
	3.2 The boolean hierarchy.	219
	3.3 Separated and biseparated union.	221
4	Chains.	223
	4.1 Chains in automata.	223
	4.2 Chains in ω -semigroups.	224
	4.3 Chains in finite ω -semigroups.	226
	4.4 Equivalence of the definitions of chains.	228
	4.5 The chain hierarchy.	230
5	Superchains.	235
	5.1 Superchains in automata.	235
	5.2 Superchains in ω -semigroups.	237
	5.3 Superchains in finite ω -semigroups.	238
	5.4 Equivalence of the definitions of superchains.	241
	5.5 The superchain hierarchy.	242
6	The Wagner hierarchy.	250
	6.1 The derived automaton.	250
	6.2 The Wagner hierarchy.	254
	6.3 Biseparated differences.	255
	6.4 The standard representatives.	256
7	Exercises.	260
	7.1 Classes of sets.	260
	7.2 Chains.	261
	7.3 Wagner hierarchy.	262
8	Notes.	263
VI Varieties		265
1	Introduction.	265
2	Varieties of finite or infinite words.	267
	2.1 Varieties of ω -semigroups	267
	2.2 Identities	268
	2.3 The varieties theorem	268
3	Varieties and topology.	272
4	Weak recognition.	277
	4.1 Weak recognition by a morphism of ordered semigroups.	277
	4.2 Recognition versus weak recognition.	282
	4.3 Properties of the strong expansion.	286

5	Extensions of McNaughton's theorem.	290
6	Varieties closed under aperiodic extension.	294
7	Concatenation hierarchies for infinite words.	296
8	Exercises.	302
8.1	Varieties of finite or infinite words.	302
8.2	Varieties and topology.	303
8.3	Weak recognition	303
8.4	Boolean combinations of deterministic sets	303
8.5	Varieties closed under aperiodic extension	305
9	Notes.	305
VII	Local properties	307
1	Introduction.	307
2	Weak recognition.	308
3	Local properties of infinite words.	311
3.1	Properties defined by letters.	311
3.2	Prefixes and suffixes of infinite words.	314
3.3	Factors of infinite words.	318
4	Exercises.	324
4.1	Local properties of finite words.	324
4.2	Factors of infinite words.	324
5	Notes.	326
VIII	An excursion into logic	327
1	Introduction.	327
2	The formalism of logic.	329
2.1	Syntax.	329
2.2	Semantics.	332
2.3	Logic on words.	336
3	Monadic second-order logic on words.	340
4	First-order logic of the linear order.	346
4.1	First order and star-free sets.	346
4.2	Logical hierarchy.	348
5	First-order logic of the successor.	356
5.1	Fraïssé-Ehrenfeucht Games.	356
5.2	Characterization of $F_1(S)$	359
6	Temporal logic.	363
6.1	Another characterization of star-free sets	365
6.2	Star-free sets and temporal logic	369
7	Restricted temporal logic	373
8	Exercises.	377

8.1	The formalism of logic.	377
8.2	Monadic second-order logic on words.	377
8.3	First-order logic of the linear order.	377
8.4	First-order logic of the successor.	378
8.5	Temporal logic.	378
9	Notes.	378
IX	Bi-infinite words	381
1	Introduction.	381
2	Bi-infinite words.	382
3	Determinism.	390
4	Morphisms.	395
5	Unambiguous automata on bi-infinite words	400
6	Discrimination.	406
7	Logic on \mathbb{Z}	409
8	Exercises.	410
8.1	Bi-infinite words.	410
8.2	Morphisms.	411
8.3	Discrimination.	411
8.4	Logic on \mathbb{Z}	411
9	Notes.	412
X	Infinite trees	413
1	Introduction.	413
2	Finite and Infinite trees.	414
3	Tree automata.	417
3.1	Automata on finite trees.	417
3.2	Büchi tree automata.	419
3.3	Muller tree automata.	420
3.4	Rabin basis theorem.	424
4	Tree automata and games.	426
4.1	Automaton and Pathfinder.	426
4.2	Rabin's tree theorem.	427
4.3	A second proof of Rabin's basis theorem.	428
5	Topology.	428
5.1	The topological space of infinite trees.	428
5.2	Suslin sets.	429
5.3	Recognizable sets.	430
6	Monadic second-order logic of two successors.	431
7	Effective algorithms.	433
8	Exercises.	433

9	Notes	434
Annex A. Finite semigroups		437
1	Monoids, semigroups and semirings.	437
1.1	Definitions	437
1.2	Congruences	440
1.3	Structure of finite semigroups	443
2	Green relations	445
3	Transformation semigroups	449
4	Semidirect product and wreath product	452
4.1	Definitions	452
4.2	Basic decomposition results	455
5	The wreath product principle	459
5.1	Sequential functions	460
5.2	Sets recognized by wreath products	461
6	Notes	464
Annex B. Varieties of finite semigroups		465
1	Varieties of algebras	465
1.1	Birkhoff varieties	465
1.2	Varieties of finite semigroups	468
1.3	Profinite algebras	469
2	The variety theorem.	475
3	Some examples of varieties.	477
4	Star-free sets.	482
4.1	Concatenation hierarchies.	487
4.2	Varieties closed under marked product.	492
5	Local properties of finite words.	493
5.1	Prefixes and suffixes of finite words.	494
5.2	Factors of finite words.	495
6	Notes	498
